

Genuine creativity. Genuine software.

SOMEONE NEEDS WHAT YOU DO

They search Google
"electrician near me"

YOUR WEBSITE

Loads fast. Says what you do.
Phone number they can tap.

They ring you

OR SEND AN ENQUIRY

Set up on Google so you actually show up

WHAT A GOOD WEBSITE ACTUALLY DOES FOR YOU

BRISBANE • WORKING RIGHT ACROSS AUSTRALIA

Capability Statement

Websites, software and AI that earn their keep. We build the thing, set it up properly, and stick around to look after it.

ABN 70 650 106 523 • 3/20 Park Rd, Milton QLD 4064

OUR DETAILS

Everything you'd want to know before *ringing us*

Who we are	DivineSoft Solutions Pty Ltd. A small web and software company in Brisbane, started in 2024.
ABN	70 650 106 523
What we do	Websites · Software built for your business · AI tools to save time · Design work · Support after it's all set up
Who we work with	Mostly Australian small business. Trades and contractors, electrical and fibre, building, transport, manufacturing, health and professional services.
We also do	SAP consulting, for bigger businesses that run it. Eight-plus years of hands-on work.
How we price	One fixed price, agreed before anything starts. No hourly surprises.
What you own	Everything. Code, files, logins, artwork. Yours at the end, whether you stay with us or not.
Where we work	Brisbane office, clients all over Australia. Happy to come to you in South East Queensland.
Hours	Monday to Friday, 8:30am – 5:30pm AEST
Give us a call	+61 450 813 695 · divinesoft2025@gmail.com

01

Fixed price

One number, agreed up front. You know what it costs before you say yes.

02

You own it

Code, files and logins are yours. No licence fees, no being stuck with us.

03

Straight answers

If you don't need us, we'll say so on the first call. That call is free.

Five things. *Pick one.*

Most people start with one and add more later. You don't need the lot.

01

Software built for your business

Job systems, quoting, scheduling, web and mobile apps. Built around the way you already work, instead of making your team work the software's way.

02

AI tools to save time

Not hype. The boring jobs your team repeats every week — sorting paperwork, drafting quotes, handling enquiries — done automatically, with you still approving anything that matters.

03

Websites

Fast sites that load quickly, look right on a phone, come up on Google, and bring you enquiries. Google Business Profile set up as well.

04

Design work

Logos and branding, website and app design, capability statements, business cards, letterhead and signage artwork.

05

Support after it's all set up

Hosting, updates, security, backups we actually test, and small changes when you need them. Month to month, no lock-in.

NOT SURE?

Just tell us what's annoying you

You don't have to know which one you need. Describe the problem and we'll tell you honestly what would fix it — including when the answer is nothing.

Software built for your business

Not another system to learn.

Off-the-shelf makes your team work the software's way. We build it around the way you already work.

One place for everything, instead of five spreadsheets and a group chat.

WHAT YOU GET

- ✓ **Job and quote systems**
Track jobs, send quotes, invoice, and see where everything sits.
- ✓ **Web apps**
Your team opens it in a browser. Nothing to install.
- ✓ **Mobile apps**
For crews on site. Works with no signal, syncs when it gets one.
- ✓ **Joining up your systems**
Accounting, CRM and job software talking to each other.
- ✓ **SAP work**
ABAP, S/4HANA, interfaces and migrations.

HOW YOU WORK NOW

- Spreadsheets
- Emails back and forth
- Re-typing the same job
- One person knows it all

Software built around it

NOT THE OTHER WAY

HOW YOU WORK AFTER

- One place for everything
- Nothing typed twice
- Anyone can pick it up
- Reports that are right

WE START WITH YOUR PROCESS, NOT A TEMPLATE

WHAT IT USUALLY COSTS

A small tool usually starts around \$8,000. A full job-management system is more like \$40,000 and up.

AI tools that save you time

You stay in control.

The boring jobs your team repeats every week, done automatically. A person still checks anything that matters.

**AI does the repeat part. You check it.
You approve it. Then it goes.**

WHAT YOU GET

Answering the same questions

A chat assistant handles what you get asked twenty times a week.

Reading and sorting paperwork

Invoices, timesheets and site reports filed, not typed in by hand.

Writing the first draft

Quotes and follow-ups drafted from your own information.

Sorting the inbox

Enquiries tagged, routed, and the urgent ones flagged.

AI inside your own software

Where it helps. Left out where it doesn't.

A JOB YOU DO
50 times a week

AI does the repeat part
YOU CHECK AND APPROVE

WHAT YOU GET BACK
Hours, every week

NOTHING IMPORTANT GOES OUT ON ITS OWN

WHAT IT USUALLY COSTS

Most AI jobs start around \$3,000 to \$10,000, plus a small monthly running cost. We work out what it saves you before you commit.

Websites that bring you work

Not a brochure nobody reads.

Fast, easy to find on Google, and clear about what you do. That's most of it.

Someone searches, finds you, and rings you. That's the whole job.

WHAT YOU GET

- ✓ **Small business websites**
Five to ten pages that load fast and look right on a phone.
- ✓ **Coming up on Google**
So you show up when people search your trade in your area.
- ✓ **Online shops**
Easy to run, and it doesn't fall over.
- ✓ **Enquiry and quote forms**
Job details arrive sorted, not as a one-line text at 9pm.
- ✓ **Rebuilds**
Slow or dated? Rebuilt without losing your Google rankings.

SOMEONE NEEDS WHAT YOU DO

FROM SOMEONE SEARCHING, TO YOUR PHONE RINGING

WHAT IT USUALLY COSTS

A small business website usually runs \$3,500 to \$8,000. Online shops start higher. No ongoing fees just to keep it.

Design that makes things *clear*

If people ring to ask how it works, that's a design problem.

Looking good matters less than being understood. We aim for both, in that order.

Same information. One version people can actually use.

WHAT YOU GET

Logos and branding

One logo that works on a sign, a shirt, an invoice and a website.

Website and app design

How it looks and how it works, before anyone builds it.

Capability statements

The PDF you send when quoting on bigger jobs.

Print

Business cards, letterhead, signage and vehicle graphics.

Making things easier to use

Fewer phone calls asking how something works.

BEFORE

People give up or ring to ask

AFTER

They know what to do next

BEFORE AND AFTER, ON THE SAME CONTENT

WHAT IT USUALLY COSTS

A logo and basic brand kit starts around \$1,500. A full brand with print and templates is \$4,000 and up.

Support after it's all set up

An untested backup is a hope, not a plan.

Websites and software go stale if nobody's watching. This is the part most people skip.

Four things every month, so nothing creeps up on you.

WHAT YOU GET

- ✓ **Hosting that doesn't fall over**
Set up in your own account, so you're never stuck with us.
- ✓ **Updates and security**
Done regularly and tested, not in a panic after something breaks.
- ✓ **Backups we actually test**
We practise getting the data back, not just check a green tick.
- ✓ **Small changes**
New staff photo, price change, extra page. Send it through.
- ✓ **An eye on Google**
Rankings, speed and where enquiries come from, in plain English.

WHAT WE CHECK, EVERY MONTH

WHAT IT USUALLY COSTS

Support plans usually run \$150 to \$600 a month, depending on what you've got.

Three steps, *no* surprises

Same for every job, whether it's a logo or a job-management system. You always know the price before anything starts.

1

Have a chat

Free, about half an hour. You tell us what's going on, we ask questions and give you a straight answer. Sometimes that answer is that you don't need us, and we'll say so.

2

Fixed quote

One price, what's in it, what isn't, and when it'll be done. Nothing starts until you're happy with it. No hourly billing, no surprises at the end.

3

Built and handed over

You see it as it goes, so changes are easy while they're still cheap. At the end you own the lot — code, files and logins.

WHO WE WORK WITH

Trades & contractors

Electrical & fibre

Building & construction

Transport & logistics

Manufacturing

Health & allied health

Professional services

Retail

Not-for-profit

Businesses running SAP

WANT A REFERENCE?

Just ask

A lot of our work sits inside client systems, so we don't publish names without permission. Ask at the first chat and we'll set up a conversation with someone doing similar work.

NEED OUR PAPERWORK?

Also just ask

Professional indemnity and public liability certificates, and anything else a tender asks for, sent through when you need them.

WANT TO SEE THE WORK?

Have a look online

Our own site is the clearest example of how we build — fast, plain English, and priced openly. Scan the code on the back page.

09 • GIVE US A CALL

Tell us what's annoying you. We'll tell you what would *fix it*.

First chat is free and takes about half an hour. No pressure, no jargon.
